# TD 4

# Java/XML Serialisation

## What Done

Create maven project and configured pom.xml.

Created books.xsd

Succesfully generated classes: Bookdata.java, CatalogData.java, ObjectFactory.java

## What Working

The above steps are working.

## What Not Working

Not successfully implemented App.java to use generated classes.

Not know how to set path to the books.xml in App.java

## How it works

Based on XSD file, XML Type classes are generated.

Can use these classes to manipulated books.xml.
